1 Disclaimer

This pattern is original from me and I've put time into it so please do not distribute it yourself. You are welcome to use it to make products you sell, but you may not sell the pattern. You may modify this pattern for personal use, and you may distribute the resulting pattern if it has significantly diverged from mine. If you have questions regarding this last point, please contact me on Ravelry or by email at halenocrafts@proton.me

2 Materials

- Blue Sky Fibers Organic Cotton (worsted weight)
- [Optional] Accent color for rim and/or bottom (worsted weight or matching main's weight)
- 4.5mm hook
- Stitch marker
- Metal tapestry needle
- Strip of fabric to reinforce brim
- [Optional] cord, yarn, or ribbon for decoration

2.1 Notes About Materials

Changing the size of yarn or hook will change the size of the beret, but I have made further notes on adjusting for some potential sizing issues in the Size Adjustment Section.

3 Terms (US)

MR	magic ring
st	stitch
sl st	slip stitch
ch	chain
sc	single crochet
dc	double crochet
dc2tog	double crochet two together
dc flo	double crochet front loop only
dc blo	double crochet back loop only
dc-flo2tog	double crochet front loop only two together

4 Notes about the pattern

This pattern uses US crochet terms. Please reference the Terms section as you go. The chains at the start of each round are not counted as a stitch.

The top of the beret is a flat disc of double crochets. Usually a dc disc starts with 10 stitches and grows by 10 per round, but in order for things to divide up in quadrants for the buttons this one will start with 8 stitches and adjusts to be a factor of 10 once past the holes.

If you prefer to work from a chart you can find one in the Chart section. It leaves off once the top returns to a dc disc that grows by 10 dc's per round.

5 Instructions

5.1 Top Disc

1. MR 8 sc, sl st to join.
2. ch2, 2dc around (16 dc's total), sl st to join
3. *ch2, dc, 2dc, ch1, sl st around last dc post, sl st in same st as the last dc was worked into. sl st into next 3 stitches*. Repeat * to * to form three more protrusions. sl st around the ch2 that started this round, then sl st into the first dc to join.
4. *ch2, 2dc, dc, 2dc. ch1, sl st on side of the last dc, then sl st into each of the 5 sl st's from the previous row. sl st around the ch2 from the previous row, then sl st into the first dc of the cluster*. Repeat * to * to continue each of the protrusions.

(a) Round 3 after creating two protrusions

(b) Round 4 after one quadrant

5. ch2, *2dc, 2dc, dc, 2dc, 2dc, ch3*. Repeat * to * to continue each of the protrusions. Finish with a sl st into the first dc of the round.

(a) End of round 5

(b) End of round 6

6. ch2, *dc x4, 2dc, dc x4. 5dc around the chains from previous row*. Repeat * to * three more times. Finish with a sl st into the first dc of the round. At this point you should have 60 dc's, which brings us to the standard stitch number for the 6th round of a dc disc.
7. ch 2, *dc x5, 2dc*. Repeat * to * nine more times, sl st to first st. [70 dc's]

8. ch 2, dc x3, 2dc, *dc x6, 2dc*. Repeat * to * eight more times, dc x3, sl st to first st. [80 dc's]
9. ch 2, *dc x7, 2dc*. Repeat * to * nine more times, sl st to first st. [90 dc's]
10. ch 2, dc x4, 2dc, *dc x8, 2dc*. Repeat * to * eight more times, dc x4, sl st to first st. [100 dc's]
11. ch 2, *dc x9, 2dc*. Repeat * to * nine more times, sl st to first st. [110 dc's]
12. ch 2, dc x5, 2dc, *dc x10, 2dc*. Repeat * to * eight more times, dc x5, sl st to first st. [120 dc's]

Figure 3: Completed beret top disc

5.2 Button rim

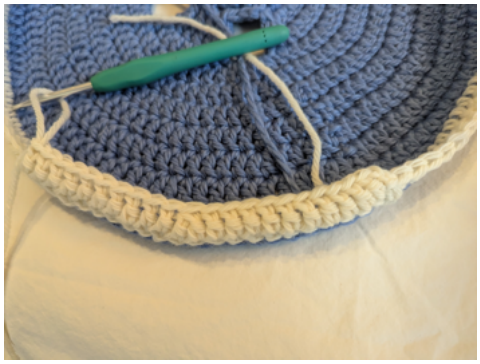

1. [Optionally cut and fasten off main color and change to accent color.] Flip the piece so that the back loop is the top of the hat. I did this because I think the front of stitches looks nicer, especially when doing a high contrast color change like I did in the pictured button. ch 2, blo dc around, sl st to first blo dc. [120 dc blo's]
   Note: Using dc blo instead of dc gives a sharper corner to the edge of the button. If you want a more rounded look you can do dc instead.

2. ch 2, dc flo x5, dc-flo2tog, *dc flo x10, dc-flo2tog*. Repeat * to * 8 more times dc flo x5, sl st to first dc [110 dc flo's]
   Note: Using dc flo will help the top turn inward at a sharper angle without a visible ridge like blo would cause. Once again, if you want a more rounded rim then try dc here instead.

(a) Start of rim

(b) Forming the top of the rim by decreasing by 10 dc's

3. ch 2, *dc x9, dc2tog*. Repeat * to * 9 more times, sl st to first dc [100 dc's]

4. ch 2, dc flo around, sl st to first dc flo, cut tail and fasten off [100 dc flo's]
   Note: Using dc flo here helps sharpen the turn from top to inside wall, if you want it rounded out then switch to dc

5. At this point you could stuff and sew the rim in place but I think it's easier to crochet the other elements before adding structure to the disc. If you want to do that part now, skip to Finishing section.

(a) Completed rim

(b) Completed rim (inside)

5.3 Finishing button holes

5.3.1 Option 1 - Raised edges

1. Join in main or accent color, ch1. sc around opening for a total of 22 stitches, sl st to first sc. [22 sc's]
2. ch 1, sc x5, 2sc, sc x10, 2sc, sc x5, sl st to first sc [24 sc's]
3. ch 1, sc around, sl st to first sc, cut tail long enough to sew around the hole and fasten off [24 sc's]
4. Fold to form a rim around the button hole and sew in place using the tail and a darning needle. Weave ends.

(a) **Option 1** - Raised edges before sewing

(b) **Option 1** - Raised edges after sewing

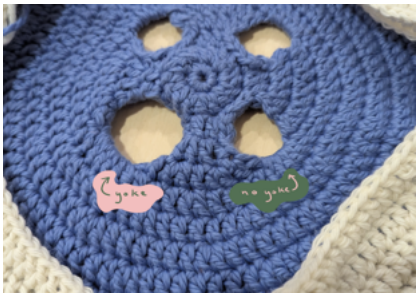

5.3.2 Option 2 - Yoke

1. Join in main color, ch1. sc around opening for a total of 22 stitches, sl st to first sc. [22 sc's]
2. ch 1, *sc x 4, 2sc* x4, sc x2, sl st to first sc. Cut tail long enough to sew around the hole and fasten off [26 sc's]
3. Fold yoke to the bottom of the beret top and sew flat using the tail and a darning needle. Weave ends.

(a) **Option 2** - Yoke before sewing

(b) **Option 2** - Yoke after sewing

5.4 Beret bottom

Note: If you are using a larger yarn for the bottom of the beret then the hook size will need to be smaller or the bottom will bubble. When the beret is complete the bottom should sit flat against the top.

1. Join rim color around the flo dc's from the first round of the rim in the first round of the rim, as shown in [Figure 8]. ch 3, tc around, sl st to first tc, pushing the chain towards the inside of the hat. [120 tc's]

Figure 8: Crochet around the post from the first round of the rim

2. If you have an accent rim color and want the bottom of the hat to match the disc color, cut and fasten off the rim color at this point and join in the disc color for the rest of the bottom rows.
3. ch 2, dc x5, dc2tog, *dc x10, dc2tog* x9, dc x5. sl st to first dc. [110 dc's]
4. ch 2, *dc x9, dc2tog* x10. sl st to first dc. [100 dc's]
5. ch2, dc x4, dc2tog, *dc x8, dc2tog* x9, dc x4. sl st to first dc. [90 dc's]
6. ch2, *dc x7, dc2tog* x10. sl st to first dc. [80 dc's]
7. ch2, dc x3, dc2tog, *dc x6, dc2tog* x9, dc x3. sl st to first dc. [70 dc's]

8. ch2, *dc x5, dc2tog* x10. sl st to first dc. [60 dc's]
9. ch2, dc x2, dc2tog, *dc x4, dc2tog* x9, dc x2. sl st to first dc. [50 dc's]
10. Check the fit of the hat and adjust as needed, keeping in mind the stretch of your yarn. See the Adjustments section for guidance.
11. ch2, *dc x4, 2dc* x10. sl st to first dc, cut a long tail for sewing. [60 dc's]
12. Turn the last row under and sew in place so that the opening is more stable.

(a) Finished bottom, unsewn

(b) Sewing the bottom edge

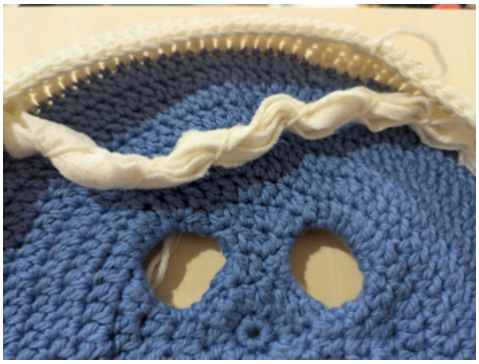

Figure 10: Completed bottom of the beret

5.5 Finishing The Rim

1. Measure the circumference inside the rim of the button.
2. Choose a fabric close in color to the rim color and that is moderately structured. A sturdy cotton voile is a great choice for this. Cut a rectangle slightly longer than the circumference measured in step 1 and wide enough to fill the rim when rolled up. The required width will vary a lot depending on your fabric and yarn.
3. Loosely roll your fabric into a long roll and wrap it in a piece of matching yarn to hold it in shape.
4. Insert the roll into the rim. When you put the ends of the roll together it should slightly push out the edges of the rim and hold a round shape. If it distorts the stitches then trim the length.

(a) Stuffing fabric rolled into a tube and wrapped with matching yarn

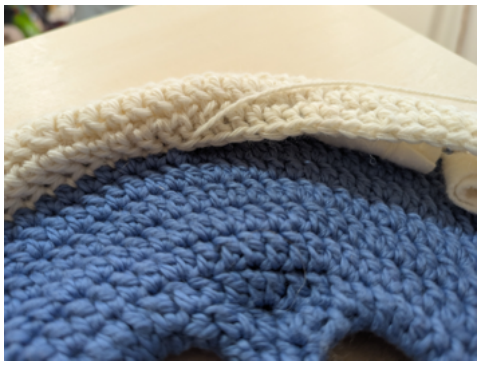

(b) Insert stuffing to fill rim

5. Sew the edge of the rim to the disc using the long tail left earlier. You can play with how the rim shape changes when you change where on the disc you sew it. I sewed mine around the post of the second round from the edge, as marked with the dashed line. Be careful to not sew through the bottom of the beret.

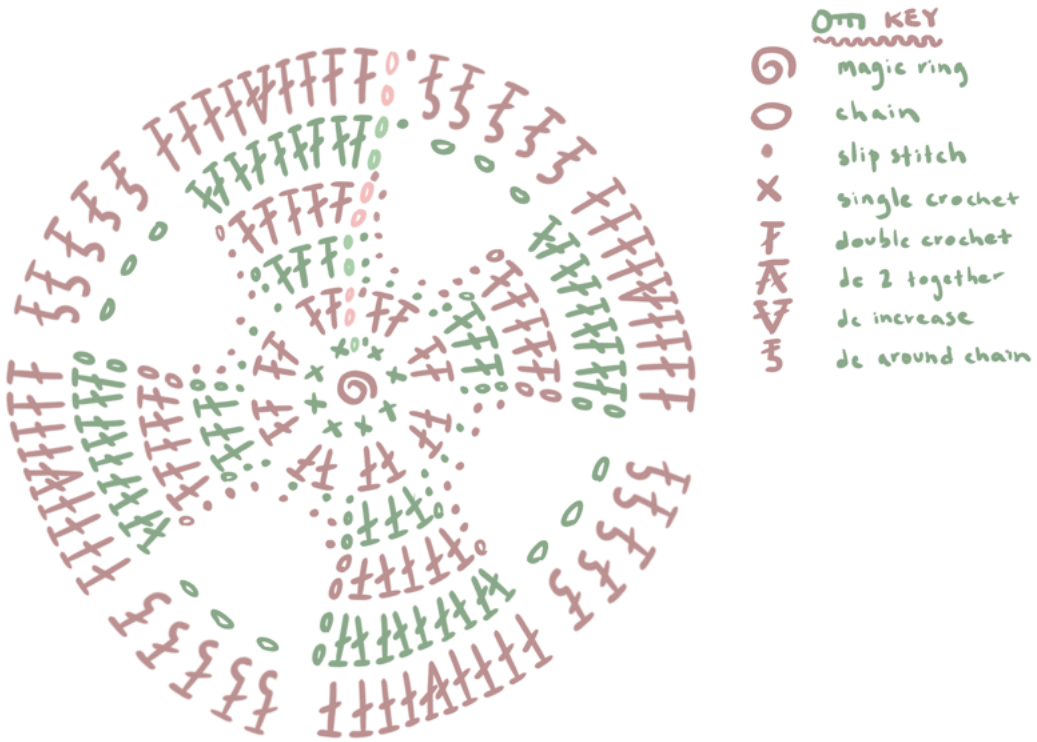

6 Completed Photos

7 Chart

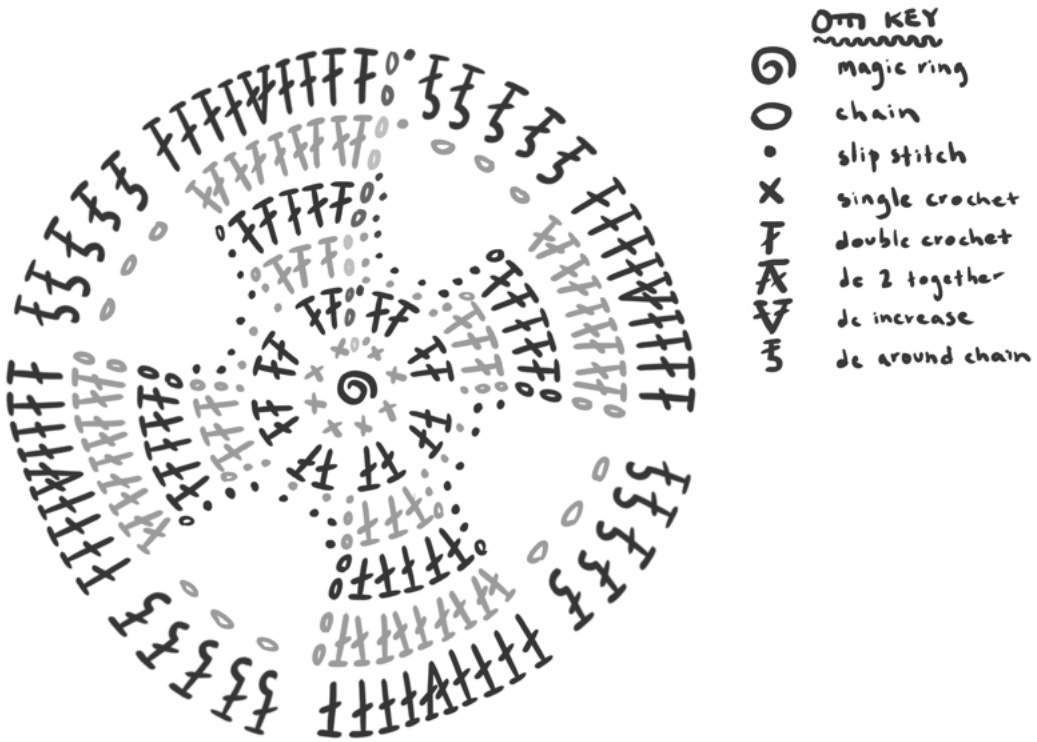

This chart leaves off just past the button holes, when the instructions return to a normal dc disc. The start of each round is delineated by a lighter color than the rest of the round. See the Grayscale Chart Section for those with limited color vision or for printing on a black and white printer.

When done with the chart, return to Step 7 of the instructions.

8 Grayscale Chart

This chart leaves off just past the button holes, when the instructions return to a normal dc disc. The start of each round is delineated by a lighter shade than the rest of the round. This chart should be easier to read for those with limited color vision, and will print better on a black and white printer.

When done with the chart, return to Step 7 of the instructions.

9 Add ons

9.1 Cords and Ribbons

Use any kind of cord or ribbon and weave it through the buttonholes to decorate the hat. Using a round cord in an X pattern and tied on the inside of the hat will give the strongest resemblance to a button. Permanently securing the tie is an option but leaving it unsewn can provide some fun variability.

10 Size Adjustments

10.1 Making the button bigger

Changing the size and placement of the button holes is more difficult, but the size of the disc can easily be changed by adding more rounds before doing the rim. Each round should increase by 10 dc's. If you add more rounds to the disc you will need to apply these changes to the rim as well. The relative stitch counts for the rim rounds are as follows:

1. The same number of stitches as the outermost round of the disc.
2. Decrease by 10 stitches
3. Decrease by 10 stitches
4. Same number of stitches as previous round

10.2 Making the rim bigger

To increase the height of the rim, either switch dc blo for tc blo or add a round of dc with the same stitch count before starting the decreases that create the top of the rim. You will need to add the same amount of height to the inside wall.

To increase the width of the rim add more decreasing rounds. Each round will decrease by 10 dc's.

10.3 Adjusting the head size

The bottom of the beret is several rounds of 10 decreases followed by one round of 10 increases. To change the head opening size add or remove rounds of decreases.

10.4 Scaling down for children

For older children the hat size can be adjusted using a combination of the changes described in the above subsections. For younger children substitute a worsted weight yarn for DK or Sport weight. You may still need to change the number of rounds, but using a smaller weight will decrease the size of the holes and the size of the solid center.

11 Thanks!

Thank you for being here and supporting my crochet addiction. Please share your projects on ravelry, I would enjoy seeing them!
